How to Use the Bot:

Run as normal Bot

Use the following information to configure your bot:

Parameter Name	Type	Direction	Additional Info
vErrorFolder	String	Input	This is error folder inside bot folder which contains Log and Snapshot folder (Already defined, no need to add value unless want to change location of file).
vLogFolder	String	Input	This folder contains Log file in case of error (Already defined, no need to add value unless want to change location of file).
vSnapshotFolder	String	Input	This folder contains Screenshot in case of error (Already defined, no need to add value unless want to change location of file).
vInputFilePath	String	Input	This Variable holds the path of input files given by the user. (User must provide input file path during the Bot runtime).
vOutputFilePath	String	Output	This Variable holds the path of output folder given by the user. (User must provide output folder path during the Bot runtime).
vFileName	String	Input	This Variable holds the File name on which the operation will be performed by Bot. (User must provide File name including extension of file e.g. Dummydata.xlsx during the Bot runtime).
vSheetName	String	Input	This variable contains the Name of Excel sheet which needs to be activated for performing operations. (User must provide Sheet Name during runtime e.g. Sheet1).

Error Handling

- Each Bot folder contains the blow hierarchy.
 - Error Folder
 - Logs
 - Error Logs Month-Day-Year.txt: In Case of any error, this file logs error message along with the time stamp.
 - Snapshots
 - Error Snap Month-Day-Year.txt: In case of any error, this file captures screenshot of error.
- Task Status of the bot is set to failed in case of error.
