OUTLOOK PROCESS FLOW

* Prerequisite:

1. The config file must be updated with the Path, Subject.
2. Outlook need to install and configure.

 * Key Points:

1. Make sure in xml start session command in Data source option we have to select updated config file from the desktop file or Control Room File.
2. Email Connect command in Username and Password fields we have to enter their own credentials.

 * The steps followed in AA for pre-processing of the document:

1. Read the CONFIG.xml (contains all the required path).
2. Make sure in your Outlook inbox mails should be unread mails with attachments.

 * Exceptions Handled:

 1. If any error occurs in the process error screenshot and logs will be created in the Error Screenshot folder.
