1. Introduction

This document contains all essential information for the user to make full use of this A2019 – Prime Number Checker Bot. It includes a description of the functions and capabilities and step-by-step procedures for setup & configuration of the A2019 – Prime Number Checker.

1.1 Overview

- This bot will help us to find the given number is prime number or not.

1.2 Use cases

The key use cases include:

1. Can be used to check whether given number is prime or not

2. Requirements & Pre-requisites

2.1 System Requirements

[Enterprise A2019 \(Cloud deployed\) and Community Edition device requirements.](#)

Review the machine hardware specifications, operating system versions, and browser types supported by Automation Anywhere Enterprise for creating and running bots and command packages as an Enterprise A2019 (Cloud deployed) or Community Edition user on your local machine.

2.2 Prerequisites

1. Automation anywhere enterprise A2019 enterprise installed.

3. Getting Started

3.1 Quick Start

3.1.1 Configuration and Use

OUTPUT VARIABLES: Output Variables to be mentioned in this Table.

Variable Name	Type	Mandatory	Direction	Example
vInputValue	String	Yes	Input	NOTE: We must provide some value to check whether prime number or not
vValue1	String	Yes	Input	NOTE: It will increment the variable value based on result from if condition.
vPrimeCount	String	Yes	Input	NOTE: This variable will increment the variable value until condition is satisfied.
vResult	String	yes	Output	NOTE: This variable returns the output value whether the given input number is prime or not.

4. Support & FAQs
