How to Use the Bot:

Use the following information to configure your bot:

Common For all logics			
Parameter Name	**Type**	**Direction**	**Additional Info**
vInputFile	String	Input	Excel filename along with full file path to protect or Unprotect the file
vPWD	String	Input	Password to protect or unprotect the Excel file
vOutput	String	Output	Provides Success or Failed
vErrorFolder	String	Input	This is error folder inside bot folder which contains Logs and Snapshots folder (Already defined, no need to add value unless want to change location of file).
vLogFolder	String	Input	This folder contains Log file in case of error (Already defined, no need to add value unless want to change location of file).
vSnapshotFolder	String	Input	This folder contains Screenshot in case of error (Already defined, no need to add value unless want to change location of file).

Error Handling

- o Each Bot folder contains the below hierarchy.
    - ▪ Error Folder
        - • Logs
            - o Error-Day-Month-Year.txt: In case of any error, this file logs error message along with time stamp
        - • Snapshots
            - o Error Snap Month-Day-Year.png: In case of any error, this file captures screenshot of error.
- o Task Status of bot is set to failed in case of errors.
