1. Introduction

This document contains all essential information for the user to make full use of this A2019 – PDF Watermark Operations. It includes a description of the functions and capabilities and step-by-step procedures for setup & configuration of the A2019 – PDF Watermark Operations.

1.1 Overview

This Automation will fill the Watermark into required PDF which has been selected by end user.

As per user's requirement he/she can select folders from the interactive form and based on user's input automation will apply the watermark to the PDF document.

1.2 Use cases & Introduction/Information

First things first – what is a watermark? A watermark is an image, overlay or text that's placed over a digital asset. Usually, the image will be monochromatic and transparent, to enable others to still view the asset.

Typically, watermarks are used to protect content and to claim ownership of an asset. Without watermarks, valuable digital assets can be susceptible to content theft or unauthorized use.

When uploading or posting your digital content to public servers or websites, a simple rightclick and save allows someone to save your asset. How, where and when they use it after that is their complete discretion.

Without proper protection, organizations that invest time and resources producing original content, risk their assets being used by others, potentially impacting business opportunities and revenue. Watermarks can deter this content theft or prevent it entirely (when done well).

2. Requirements & Prerequisites

2.1 System Requirements

Enterprise A2019 (Cloud deployed) and Community Edition device requirements.

Review the machine hardware specifications, operating system versions, and browser types supported by Automation Anywhere Enterprise for creating and running bots and command packages as an Enterprise A2019 (Cloud deployed) or Community Edition user on your local machine.

2.2 Prerequisites

User should have a **A2019** installed to take a benefit of this automation.

User should have a **Python-3** installed to take a benefit of this automation.

User need to have PDF file as a Watermark file.

3. Getting Started

3.1 Quick Start

3.1.1 Configuration and Use

- Download the Bot from the Bot-store.
- Check the downloaded bot in your local machine private/Public section.
- Once Bot is downloaded you are good to go for a run.
- Please select any option from the interactive form for encode OR decode.

o For Configuring the Bot -
