Table of Contents

1.   Introduction

This document contains all the essential information for the user to make full use of this A360 Bot. It includes a description of the functions and capabilities and step-by-step procedures for the setup & configuration of the Bot.

1.1   Overview

This Bot formats the number in the required format. The bot uses Python script to format the number.

It takes two input parameters. The first parameter is the number, and the second is the format. Based on the input, the bot returns a formatted number.

1.2   Use cases

1. Assign the Number.

2. Assign format type index number.

Format type indexes are as mentioned in the below table.

User has to choose below mentioned format index only.

InputNumber	Number Format Index	FormattedNumber
22434	1	22434.00
22434	2	22434.00%
22434	3	22,434

3. Open python script and execute function "ConvertToNumberFormat".

4. Log the Output of selected Format.

2. Requirements & Prerequisites

2.1 System Requirements

Enterprise A2019 (Cloud deployed) and Community Edition device requirements.

Review the machine hardware specifications, operating system versions, and browser types supported by Automation Anywhere Enterprise for creating and running bots and command packages as an Enterprise A2019 (Cloud deployed) or Community Edition user on your local machine.

2.2 Prerequisites

The user should have an A2019 installed to take benefit of this automation.

3. Getting Started

3.1 Quick Start

3.1.1 Configuration and Use

- Download the Bot from the Bot-store.
- Check the downloaded bot in your local machine private/Public section.
- Once Bot is downloaded you are good to go for a run.

o For Configuring the Bot –
